Symmetry occurs not only in geometry, but also in other branches of mathematics. Symmetry is a type of invariance: the property that something does not change under a set of transformations.. Given a structured object  $X$  of any sort, a symmetry is a mapping of the object onto itself which preserves the structure. This occurs in many cases; for example, if  $X$  is a set with no additional structure ...

$4^{2 \cdot 3/6} + 1 \hat{=} 5/14 \cdot 3 + 6/10 \hat{=} 4^{2/14} \cdot 6^{3/18} + 14$ . which is the kind of question little sisters give you when they are old enough to finally sort of get what a mathematician is.. It's important to note that not all calculators handle the order of operations in the standard way.
