

computational intelligence in design pdf

The central scientific goal of computational intelligence is to understand the principles that make intelligent behavior possible, in natural or artificial systems. The main hypothesis is that reasoning is computation. The central engineering goal is to specify methods for the design of useful, intelligent artifacts.

Introduction to Computational Intelligence - Computer Science

The International Journal of Computational Intelligence Research (Research In-dia Publications, since 2005) is a free online journal. In description of its aims the connection with biology is stressed: “Computational intelligence is a well-established paradigm, where new theories with a sound biological understanding have been evolving.

What is Computational Intelligence and what could it become?

purposes. Recent approaches to computational design are based on an emerging information processing paradigm known as computational intelligence (CI), consisting of the methodologies known as fuzzy logic, evolutionary computation, artificial neural networks, and other, bio-inspired, computational systems (Zadeh 1994; Engelbrecht 2005).

A Computational Intelligence Approach to Alleviate

The field of computational intelligence (CI) comprises a range of algorithms designed to analyse datasets and draw generalisable conclusions from that data with a minimum of human intervention (Engelbrecht, 2007).

The expression computational intelligence (CI) usually refers to the ability of a computer to learn a specific task from data or experimental observation. Even though it is commonly considered a synonym of soft computing , there is still no commonly accepted definition of computational intelligence.
