CORROSION PROTECTION METHODS. There are many methods to reduce corrosion in all types of structures. Specifically in steel pipelines there are three main types: coatings, corrosion inhibitors and cathodic

2 1 Corrosion and Corrosion Protection â€œ Corrosion damage: Corrosion phenomenon causing the impairment of the metal function, of the environment or of the technical system of which they form a part. â€œ Corrosion failure: Corrosion damage characterized by the complete loss of operational capability of the technical system.

use of corrosion inhibitors in prestressed, concrete members has gained acceptance. For most corrosion-protection measures, the basic principle is to prevent the chloride ions from reacting with the steel surface and also to increase the time needed for the chloride ions to penetrate through the concrete cover.

Corrosion protection paints used against atmospheric stress utilise corrosion protection pigments, which retard the dissolution of metal ions from the anode sites. Various phosphates and borates, for example, are used as corrosion protection pigments, which, together with water entering the coating, form protective layers at the anode sites.
