A conceptual model is a representation of a system, made of the composition of concepts which are used to help people know, understand, or simulate a subject the model represents. It is also a set of concepts. Some models are physical objects; for example, a toy model which may be assembled, and may be made to work like the object it represents.. The term conceptual model may be used to refer ...

Scientific modelling is a scientific activity, the aim of which is to make a particular part or feature of the world easier to understand, define, quantify, visualize, or simulate by referencing it to existing and usually commonly accepted knowledge.It requires selecting and identifying relevant aspects of a situation in the real world and then using different types of models for different ...

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.

Reading instruction does not need to stop when the bell rings. Using out-of-school time (OST) can be an effective way to boost academic skills while engaging students outside of the classroom. Education research lab McREL reviews effective afterschool and summer programs that focus on reading, and identifies the components that make them successful.
