The Information Assurance (IA) mission at the National Security Agency (NSA) serves a role unlike that of any other U.S. Government entity. National Security Directive (NSD) 42 authorizes NSA to secure National Security Systems, which includes systems that handle classified information or are otherwise critical to military or intelligence activities.

In computing, hardening is usually the process of securing a system by reducing its surface of vulnerability, which is larger when a system performs more functions; in principle a single-function system is more secure than a multipurpose one. Reducing available ways of attack typically includes changing default passwords, the removal of unnecessary software, unnecessary usernames or logins, and ...

TLS (Transport Layer Security) is a cryptographic protocol used to secure network communications. When hardening system security settings by configuring preferred key-exchange protocols, authentication methods, and encryption algorithms, it is necessary to bear in mind that the broader the range of supported clients, the lower the resulting security.

PROGRAMMING PLUS Â® provides Independent Consulting and Professional Engineering Services in the fields of Computer Hardware and Software. We provide highly specialized and highly technical services which span the fields of Computers, Networks, Internet and Engineering.

### **Programming Plus : Computer Consulting & Professional**

PaX is a patch for the Linux kernel that implements least privilege protections for memory pages. The least-privilege approach allows computer programs to do only what they have to do in order to be able to execute properly, and nothing more. PaX was first released in 2000. PaX flags data memory as non-executable, program memory as non-writable and randomly arranges the program memory.

### **PaX - Wikipedia**

1. Preparation. Keep things simple: it is expected that only one or two services will run on a host. Use several machines, rather than one superserver that does everything.
