Integrated Pest Management: Conducting Urban Rodent Surveys

Pest control is the regulation or management of a species defined as a pest, a member of the animal kingdom that impacts adversely on human activities. The human response depends on the importance of the damage done, and will range from tolerance, through deterrence and management, to attempts to completely eradicate the pest.

Pest control - Wikipedia

Biological control or biocontrol is a method of controlling pests such as insects, mites, weeds and plant diseases using other organisms. It relies on predation, parasitism, herbivory, or other natural mechanisms, but typically also involves an active human management role. It can be an important component of integrated pest management (IPM) programs.. There are three basic strategies for ...

Biological pest control - Wikipedia

4.. Health and environmental impacts Perhaps the most attractive aspect of using essential oils and/or their constituents as crop protectants (and in other contexts for pest management) is their favorable mammalian toxicity.

Plant essential oils for pest and disease management

V. Pest Management. Prevention is the first tool in pest management because it is the most effective, least expensive, most environmentally friendly solution. Choosing a healthy plant that thrives in the desired location with the available light, planting it carefully, and ensuring that it has adequate water and nutrients prevents stress and minimizes pest problems.
